

Cold Exposure

Exposure to cold conditions can lead to hypothermia (generalised cooling of the body) or frostbite (localised cold injury).

Hypothermia: is a condition where the body temperature drops **below 35°C**.

- Suspect hypothermia when conditions are cold, wet and windy, especially in the young and elderly or individuals under the influence of alcohol or drugs.

- As the core body temperature drops, so does the metabolic rate which means the cells require less oxygen. Hypothermia protects the brain from the effects of hypoxia so resuscitation should be continued until the casualty can be rewarmed in hospital.

MILD Hypothermia	35°–34°C	33°–30°C	Shivering ceases	Muscle rigidity increases	Slow breathing	Slow pulse	Apathy and slow thinking	Memory loss

FIRST AID

• DO NOT re-warm **too quickly** - can cause heart arrhythmias.

• Seek shelter - protect from wind chill.
• Replace wet clothing with dry.
• Wrap in blankets/ sleeping bag or space blanket and cover head.
• Give warm, sweet drinks if conscious.
• IF NOT SHIVERING:
• Apply heat packs to groins, armpits, trunk and side of neck.
• Body-to-body contact can be used.

• Repetitive shivering to avoid heart arrhythmias.
• Handle gently to avoid heat loss.
• Keep horizontal to avoid changes in blood supply to brain.

• Repetitive shivering to avoid heat loss.
• Wrap in blankets/ sleeping bag or space blanket and cover head.
• Give warm, sweet drinks if conscious.
• IF NOT SHIVERING:
• Apply heat packs to groins, armpits, trunk and side of neck.
• Body-to-body contact can be used.

• Replace wet clothing with dry.
• Wrap in blankets/ sleeping bag or space blanket and cover head.
• Give warm, sweet drinks if conscious.
• IF NOT SHIVERING:
• Apply heat packs to groins, armpits, trunk and side of neck.
• Body-to-body contact can be used.

• DRSABCD (pg 3) - Check breathing/pulse for 30-45 secs as hypothermia slows down everything.
• IF UNCONSCIOUS:
• DRSABCD (pg 3) - Check breathing/pulse for 30-45 secs as hypothermia slows down everything.
• If no signs of life - commence CPR while re-warming casualty.

• Seeks shelter • Treat hypothermia before frostbite • Gently remove clothing from affected area • Rewarm affected area with body heat - place in armpit (**rewarming can be very painful!**) • DO NOT rub or massage affected area - tiny ice crystals in tissue may cause more damage • DO NOT use radiant heat • DO NOT break blisters

• NEVER thaw a part if there is any chance of it being re-frozen. Thawing and refreezing results in far more tissue damage than leaving tissue frozen for a few hours.
• If no signs of life - is the freezing of body tissues and occurs in parts exposed to the cold. issues and occurs in parts exposed to the cold.

FIRST AID

SIGNS & SYMPTOMS • White, waxy skin • Skin feels hard • Pain or numbness

• Seeks shelter • Treat hypothermia before frostbite • Gently remove clothing from affected area • Rewarm affected area with body heat - place in armpit (**rewarming can be very painful!**) • DO NOT rub or massage affected area - tiny ice crystals in tissue may cause more damage • DO NOT use radiant heat • DO NOT break blisters

• DRSABCD (pg 3) - Check breathing/pulse for 30-45 secs as hypothermia slows down everything.
• If no signs of life - commence CPR while re-warming casualty.

• Repetitive shivering to avoid heat loss.
• Wrap in blankets/ sleeping bag or space blanket and cover head.
• Give warm, sweet drinks if conscious.
• IF NOT SHIVERING:
• Apply heat packs to groins, armpits, trunk and side of neck.
• Body-to-body contact can be used.

• Replace wet clothing with dry.
• Wrap in blankets/ sleeping bag or space blanket and cover head.
• Give warm, sweet drinks if conscious.
• IF NOT SHIVERING:
• Apply heat packs to groins, armpits, trunk and side of neck.
• Body-to-body contact can be used.

• Repetitive shivering to avoid heat loss.
• Wrap in blankets/ sleeping bag or space blanket and cover head.
• Give warm, sweet drinks if conscious.
• IF NOT SHIVERING:
• Apply heat packs to groins, armpits, trunk and side of neck.
• Body-to-body contact can be used.

• Replace wet clothing with dry.
• Wrap in blankets/ sleeping bag or space blanket and cover head.
• Give warm, sweet drinks if conscious.
• IF NOT SHIVERING:
• Apply heat packs to groins, armpits, trunk and side of neck.
• Body-to-body contact can be used.

• DO NOT use radiant heat (eg fire or electric heater) - re-heats too quickly.

• Handle gently to avoid arrhythmias.
• Keep horizontal to avoid changes in blood supply to brain.

• Repetitive shivering to avoid the influence of alcohol.

• Maximum shivering
• Pale, cool skin, blue lips
• Poor coordination
• Slurred speech
• Irritable or confused
• Apathy and slow thinking

• Muscle rigidity increases
• Consciousness cloudy to detect
• Slow breathing
• Slow pulse

• Cardiac arrest
• Appears dead
• Pupils fixed and dilated
• Cardiac arrhythmias
• Unconscious
• Shivering ceases
• Slow breathing
• Slow pulse

• Memory loss
• Irritable or confused
• Apathy and slow thinking

• Maximum shivering
• Pale, cool skin, blue lips
• Poor coordination
• Slurred speech
• Irritable or confused
• Apathy and slow thinking
